

# Psoriasis Area And Severity Index (PASI)

Hospital No: \_\_\_\_\_

Date of Visit: \_\_\_\_\_

Patient Name: \_\_\_\_\_

<b>PASI score</b>

The Psoriasis Area and Severity Index (PASI) is a quantitative rating score for measuring the severity of psoriatic lesions based on area coverage and plaque appearance.

Plaque characteristic	Lesion score	Head	Upper limbs	Trunk	Lower limbs
Erythema	0 = None 1 = Slight				
Induration/Thickness	2 = Moderate 3 = Severe				
Scaling	4 = Very severe				
Add together each of the 3 scores for each body region to give 4 separate <b>Lesion score sums (A)</b> .					
<b>Lesion score sum (A)</b>					

Percentage area affected	Area score	Head	Upper limbs	Trunk	Lower limbs
<b>Area score (B)</b> Degree of involvement as a percentage for each body region affected (score each region with score between 0-6)	0 = 0% 1 = 1% - 9% 2 = 10% - 29% 3 = 30% - 49% 4 = 50% - 69% 5 = 70% - 89% 6 = 90% - 100%				
Multiply <b>Lesion score sum (A)</b> by <b>Area score (B)</b> , for each body region, to give 4 individual <b>Subtotals (C)</b> .					
<b>Subtotals (C)</b>					
Multiply each of the <b>Subtotals (C)</b> by amount of body surface area represented by that region, i.e. x 0.1 for head, x 0.2 for upper body, x 0.3 for trunk, and x 0.4 for lower limbs.					
<b>Body Surface Area</b>		<b>x 0.1</b>	<b>x 0.2</b>	<b>x 0.3</b>	<b>x 0.4</b>
<b>Total (D)</b>					
Add together each of the scores for each body region to give the final <b>PASI Score</b> .
